

ONE SUN - TWO OBSERVABLE REGIMES

QUIET-SUN MINI-WAVE

compact heating + faint front
small ejecta / dimming
published speed: 14 or about 45 km/s
front energy: illustrative estimate

GLOBAL EIT/EUV WAVE

outer crest / possible shock
CME-related front + dimming
speed depends on crest, cadence,
sector, interval and geometry

shared anatomy source - ejecta/dimming - front

cross-scale test $f_{\text{front}} = E_{\text{front}}/E_{\text{release}}$

constant?
