

THREE QUANTIFIED OBSERVATIONAL OFFSETS

(a) Sector + fit interval

early /
fastest sector

345 km s⁻¹

171 Å
2.5 min

longer
profile

296 km s⁻¹

21 common events
Nitta vs Muhr

0 100 200 300 400
mean catalogue speed (km s⁻¹)

(b) Passband + cadence

171 Å
2.5 min

475±47

304 Å
10 min

238±20

same 19 May 2007 event
195 Å evolved similarly to 304 Å

0 100 200 300 400 500
reported peak speed (km s⁻¹)

(c) Radial-bin quantisation

one ring: $\Delta r = 91.6$ Mm

one interval: $\Delta t \approx 110$ s

$\Delta r / \Delta t = 833$ km s⁻¹

published repeated value ≈ 834 km s⁻¹

A numerical sampling signature;
not proof that the physical front was unaccelerated.
